

CDi OnDemand Data-as-a-Service

Do You Have On-Demand Access to Your Data? Can Your Organization Execute Data Projects Within Days?

In today's data-driven world, day-to-day short-term data project needs are inevitable. These project requirements tend to involve changes to even the most robust data architecture – modifying the existing logic, developing a new module or integrating third-party data feeds, for example. As such, they're often quite resource intensive and IT has a long queue of projects on the strategic roadmap. As a result these projects are often either overlooked or executed with suboptimal procedures, leading to a parallel production mess that has to be cleaned up in the future, and could even put the enterprise at risk.

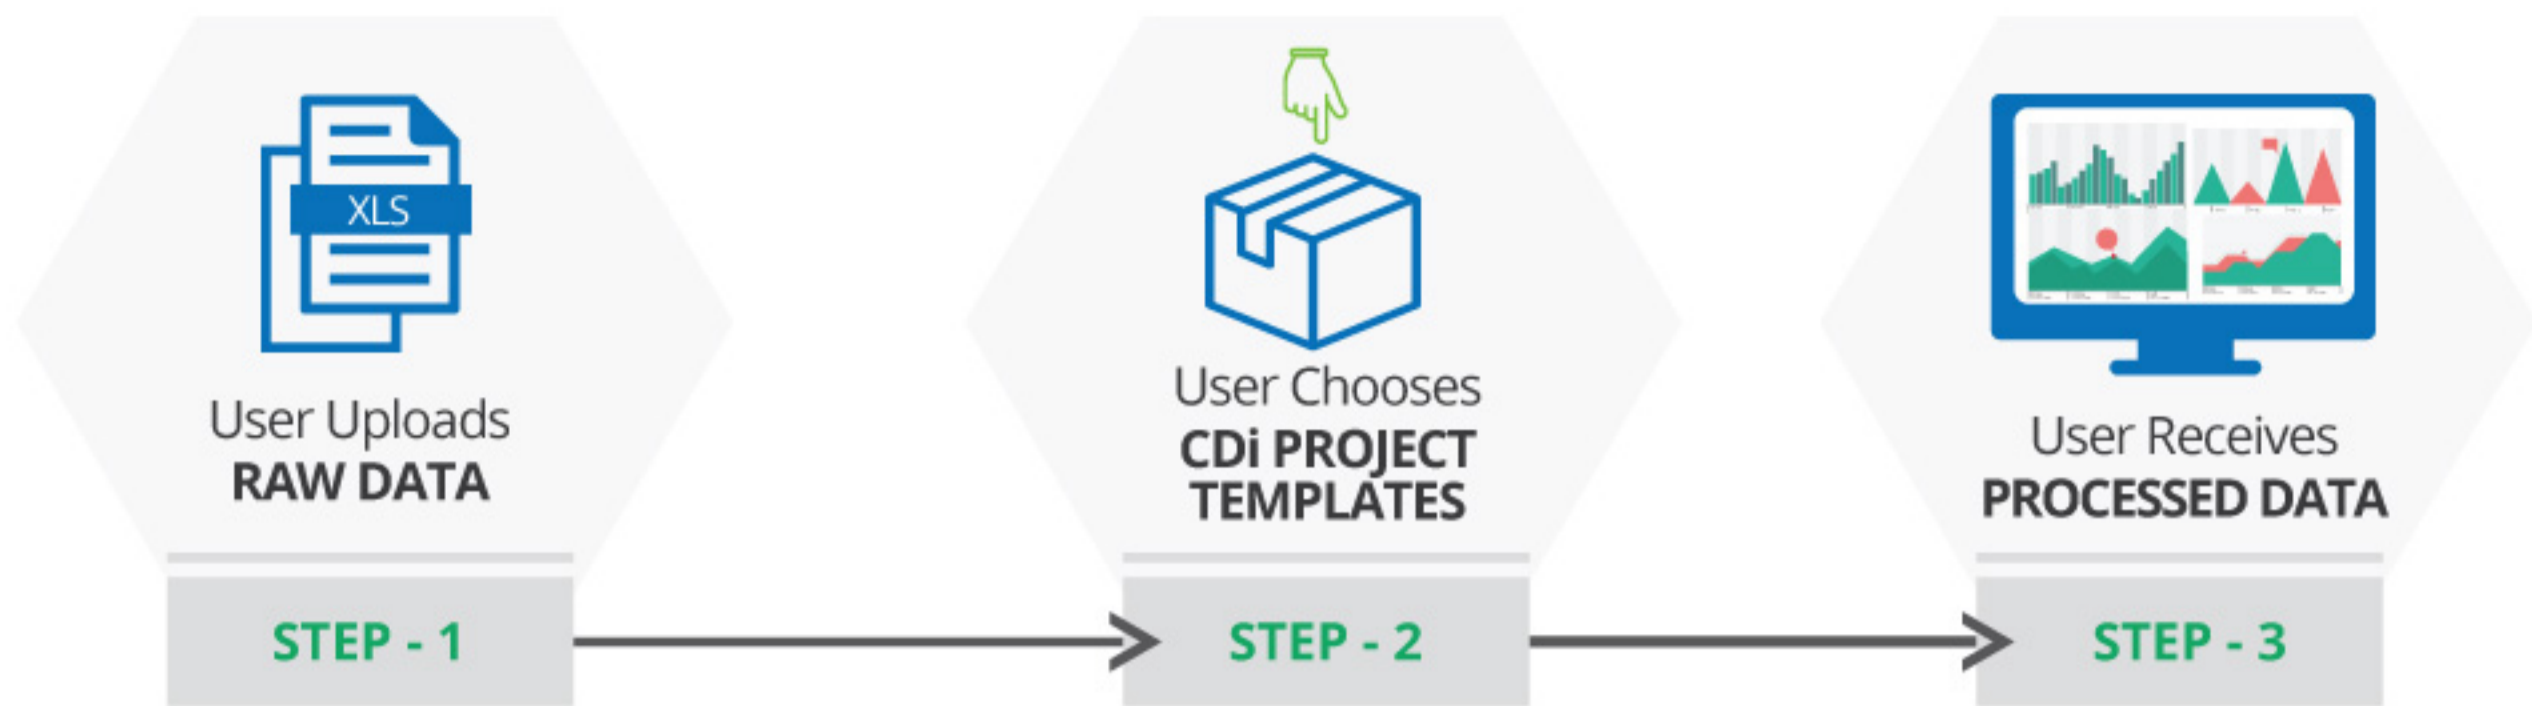

The Solution: Xoriant CDi OnDemand

Most data projects have three core elements: stewardship, technology, and data. CDi OnDemand bundles those elements and makes them available as-a-service, with the most common use cases available as project templates. Then you can execute data projects optimally, in days.

The Power of Data-as-a-Service

- > Enforce a single point of data governance
- > Enforce the highest degree of compliance with policies and procedures across the organization
- > Reduce cost of data ownership
- > More easily address data quality issues
- > Drive wider acceptance of your data program by building confidence in the quality of underlying data with a consistent means of data processing and extraction
- > Create transparency between data custodian, owners and consumers about data definitions and quality standards

How it Works

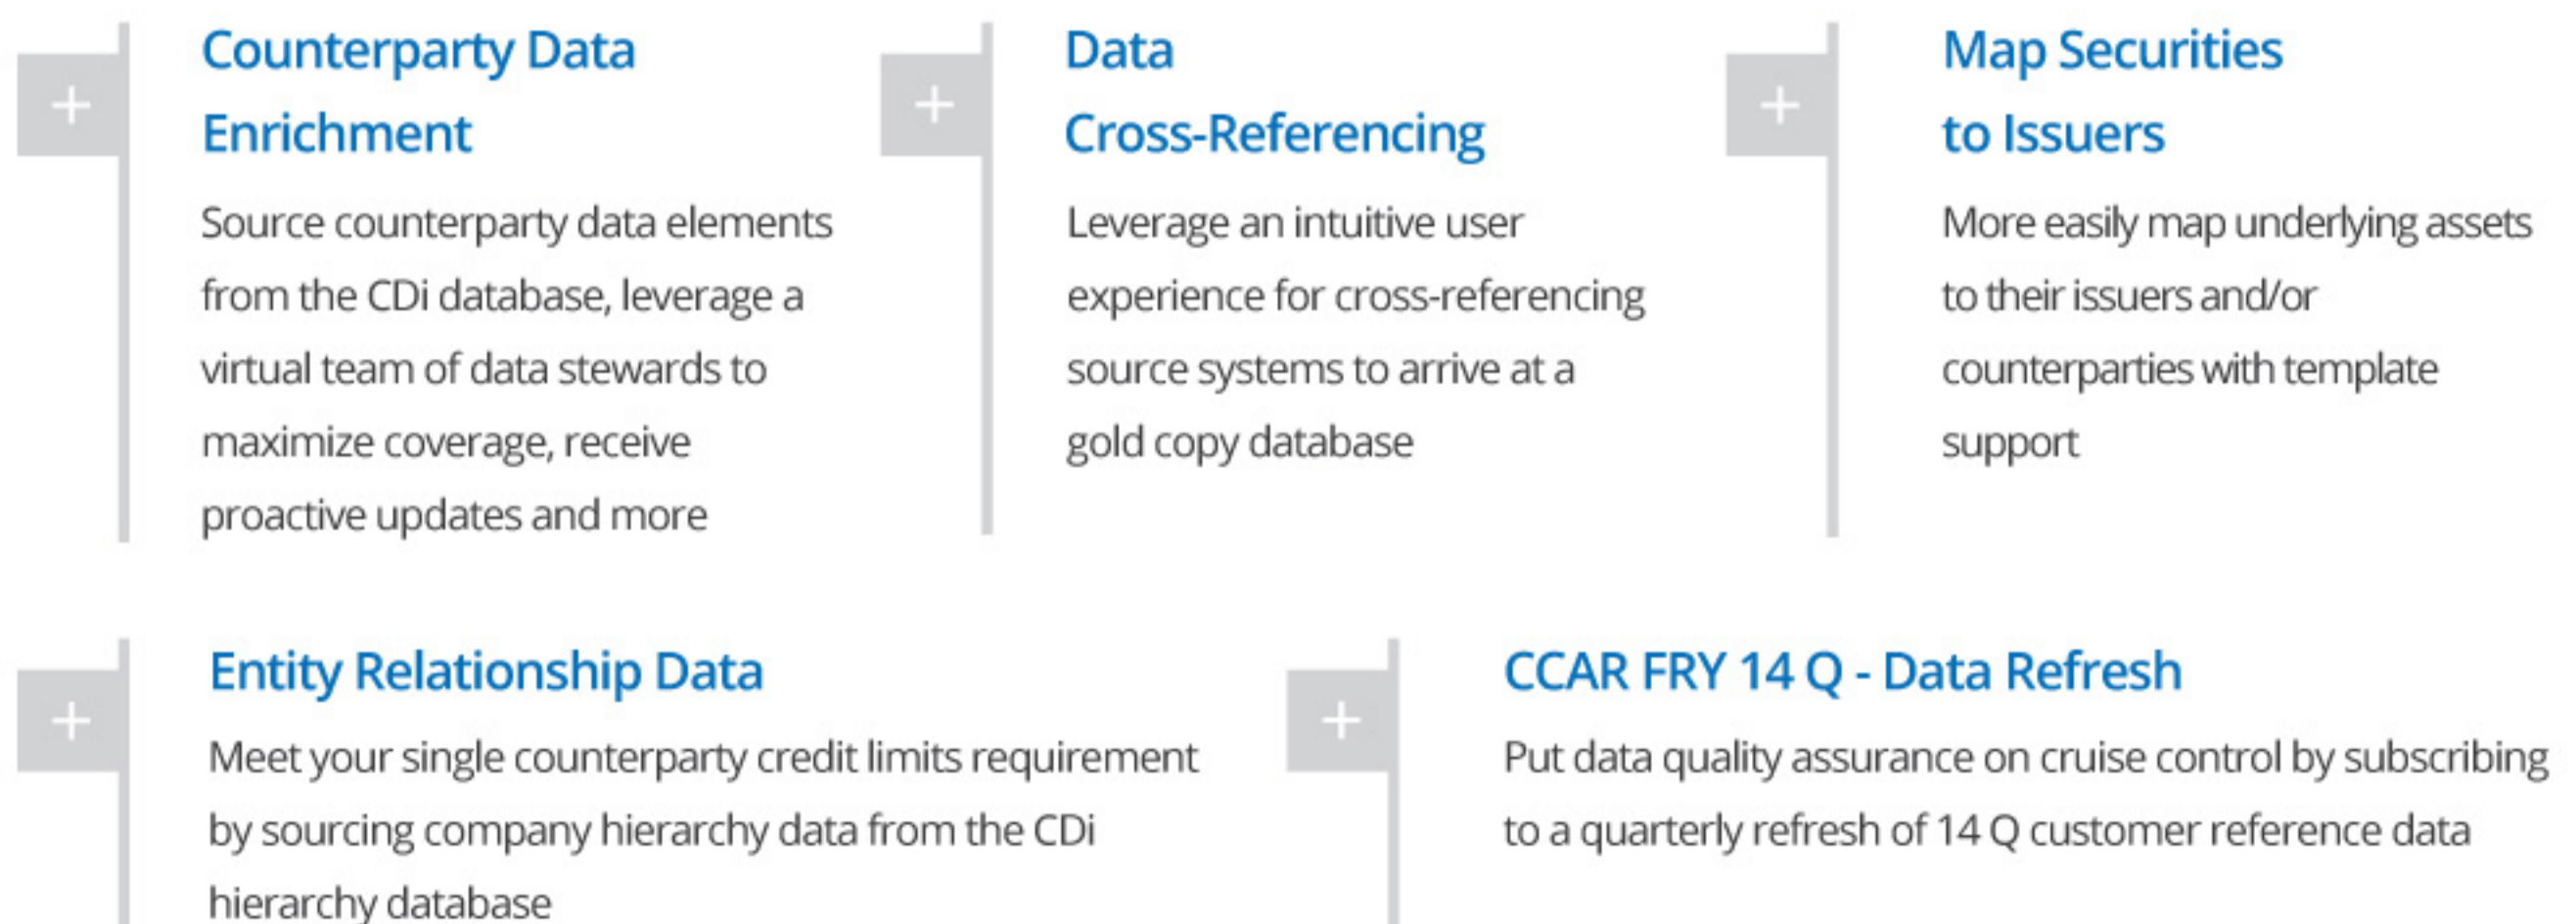

Why Global Financial Institutions Choose CDi OnDemand

- > Self-service model for gold copy database creation and management
- > Unlimited queries of CDi entity database
- > Customized operational workflows
- > Rapid data aggregation
- > Elastic manpower – 24x5 access to CDi data stewards
- > No software installation
- > No resource onboarding
- > Much more than a Data Utility

On-Demand Project Templates

Having project templates makes it easier to enforce data governance consistently across all projects. With on-demand templates from CDi, business and data stewards are empowered with tools that otherwise wouldn't be easily available. CDi OnDemand project templates include:

Xoriant CDi merges 15+ years of data management experience with big data & analytics and IT services & solutions to deliver end-to-end enterprise data solutions.
