

Solutions Supporting CDO 2.0 and Beyond

Today the CDO role has emerged to be the central point in transforming the data practice for driving the business value rather than just focusing on compliance and regulatory needs. The new CDO role is not limited to just enterprise data management, but it expands to leveraging emerging technologies including AI, Machine Learning, Automation on getting analytics and insights from the data.

Gartner Research states that CDO 1.0 was focused exclusively in data management. CDO 2.0 started to embrace analytics. CDO 3.0 led and participated quite heavily in digital transformation. This fourth version of the CDO is focused on products, and on managing profit and loss instead of just being responsible for driving D&A projects and programs.

Aggregate

Data is often stored or received from different places and can be stored in structured and unstructured formats. At Xoriant we have developed targeted solutions and accelerators to get your data into one place. Our frameworks are capable of ingesting data in different formats, migrating from different platforms and assist with resolving data anomalies.
